

# BEER LINE PRO

*Your Safe Compliant Beerline Cleaning Solution*

## Protect Your Brand

With the Beer line Pro you can rest easy knowing your Beer line Cleaning System satisfies the requirements of the Plumbing Code of Australia and Watermark Certification Scheme.

The unique Beer line Pro system does not require connection to electricity or a battery, using water as the power source. Water flow draws a precise amount of cleaning concentrate directly from the chemical solution container and mixes it with water in the mixing chamber.

Water flow then delivers the mixed solution through the beer lines to ensure cleanliness and avoid unwanted contamination. Variations in flow-rate are no problem as the amount of concentrate is directly proportionate to the volume of water entering the mixing chamber, so installation in areas with low water flow rate is never a problem.

When installed by a Plumber licensed in your state or territory, Beerline Pro not only meets all statutory requirements for safe connection to your water supply, but also provides consistent ongoing system cleanliness considered so important in this industry.
